GRAPHISOFT rolls out global Learn platform for BIM professionals

New GRAPHISOFT Learn makes critical knowledge about BIM easily available, shortens learning curves, and helps architects get the most out of BIM to increase their competitive edge.

BUDAPEST, July 8, 2020 – GRAPHISOFT, the leading Building Information Modeling (BIM) software solution for architecture, today announced the roll-out of its expanded GRAPHISOFT Learn program. The new learning platform makes critical knowledge readily available to architects and engineers alike, helping AEC industry professionals get the most out of BIM by shortening the BIM learning curve and growing their competitive edge with important skills.

Organized in learning paths to match skill levels, roles, and interests, GRAPHISOFT Learn offers a quickly growing catalog that includes on-demand, self-paced lessons, and detailed, instructor-led courses. Courses are available in person through GRAPHISOFT-certified Learning Centers and online through learn.graphisoft.com. All online training includes step-by-step instructions, narrated video clips, and ready-to-use Archicad project files for hands-on experience.

"The response to our virtual learning programs has been phenomenal as users look to improve their workplace skills and competitiveness," said Gergely Kmethy, Senior Director for Global Customer Success at GRAPHISOFT. "Our more in-depth activities, such as the very popular BIM Manager Training, have shifted from in-person to online during the current pandemic, attracting an even wider audience — prompting us to expand the programs to meet demand and take fuller advantage of the new potential that a virtual learning experience can offer," he added.

"GRAPHISOFT's training courses are great — clear and complete both for beginners and advanced users. As for the content, it is thorough and well-explained, always," said Federico Tizzoni, a student at Politecnico de Milano in Italy.
